

A POWERFUL REPORTING TOOL FOR LIFE SCIENCES

EFFICIENT, INTUITIVE REPORTING

Nexus Insight is a bespoke reporting tool for life sciences. It has been built alongside the Vicon community to simplify, save time, and make effortless data comparison, all within our leading motion capture ecosystem.

Ш

One of the key things that we can do with Nexus Insight is use it to produce reports that an athlete can take away. Users now have these simple steps which integrates really nicely into Nexus. That's just another example of Vicon being one step ahead of us, producing the next technology that will be really valuable to us moving forward."

SIMON BRILEY,

Lecturer in Sport and Exercise Biomechanics, University of Derby

"

This tool can be used effectively to illustrate key findings in an accessible way while still allowing the possibility for deeper exploration. Within teaching, this could enable students to interact with graphs alongside interactive 3D Vicon data and produce automated reports. Hopefully, it can play a small part in continuing to spread our great science of biomechanics to the wider world."

STUART MCERLAIN-NAYLOR,

Lecturer in Sport and Exercise Biomechanics, Loughborough University

CUSTOMIZED DATA REPORTING

Nexus Insight allows biomechanists to take their **high-quality Vicon data** and turn it into **clear, accessible reports.**

Customizable layouts with 3D visuals, videos, and data graphs

Create personalized graphs

Add 3D overlay visualizations

Graph data directly from Nexus

Take notes on data charts for detailed information

Import and compare reference data for 3D and EMG data

Make custom-made report templates or use existing examples

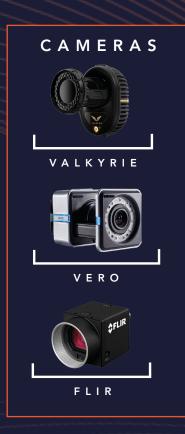

Locally save and manage your reports

View and change video playback speed

PART OF THE BEST-IN-CLASS VICON ECOSYSTEM

N E X U S

Feature-set designed specifically for life sciences:

இ் one-click pipeline processing

event identification

Q automatic capture

native MATLAB/Python integration

data management

Customized reports and templates for direct reporting in Nexus Insight
